

Track Employee Time Worked By Department, Task, and Location

Hi [FNAME] [Customer/Guest],

Knowing the EXACT time spent by each of your employees by task (baking, mixing, packing) and by product type (such as breads, cookies, cakes), can help you **reduce labor costs and better manage your production scheduling**. POMeTime measures the time each employee spends in three different ways, which you can customize. For example, you can track by department (pastry, bread, cakes), by task/function (mixing, baking), or by location (work station, store, facility).

POMeTime has two components, the first of which is a back-end program for managers. The second, POMeTime Android, runs on a 6" to 10" Android tablet used by employees to clock in and out. POMeTime can be set up anywhere, and **is completely independent from any other software you may use**. Employees changing tasks can clock out of one task, and clock in to another.

Click below to find out how POMeTime can help you improve your business efficiency by tracking employee time **for as low as \$19/station**.

Call us at 626-793-7223 or [click here](#) to request a demo!
